EDUCATION

Seattle University

Bachelor of Science in Computer Science, Minor in Mathematics

Merit Scholarship: \$23,500 per annum

Seattle, WA

June 2025

EXPERIENCE

Bilimetrix USA LLC

July 2025 – August 2025

Software Engineer Intern

Seattle, WA

- Enhanced a diagnostic platform with real-time updates, automated workflows, and interactive visualizations, focusing on performance, reliability, and accessibility across clinics
- Built reusable chart components to visualize patient trends and improve clinical decision-making
- Skills: C#, ASP.NET, HTML5, MySQL, Git, Chart.js, Agile, Scrum

F5

September 2024 – June 2025

Software Engineer Intern - Capstone

Seattle, WA

- Developed an AI-assisted platform to automate LUA diagnostic script generation from bug datasets, reducing manual script creation time 40% and achieving 80% alignment with manual heuristics.
- Designed modular GPT-4o prompts with validation simulating expert diagnostic logic ensuring fidelity outputs.
- Built full-stack pipeline with React + Flask featuring bug search, script generation, validation, and download.
- Curated and normalized datasets, creating reusable templates and optimizing workflows for reproducible generation.
- Collaborated using Git and Azure DevOps in Agile framework to integrate feedback and track development.
- Skills: LUA, Python, Flask, React.js, GPT-4o, Pandas, Git, Azure DevOps, Agile, Scrum

Seattle World School

Seattle, WA

Learning Facilitator

October 2023 – June 2025

- Assisted Grade 9–12 students in Computer Science, Math, Physics, Chemistry, and Astronomy during class.
- Partnered with teachers and Microsoft TEALS volunteers to enhance instruction and improve assignment accessibility.
- Skills: Communication, Peer Collaboration, Initiative, Student Mentorship, Visual Explanation, Adaptability

PERSONAL PROJECTS

Portfolio Website | React, Vite, Tailwind CSS, GSAP, Netlify

mirza-kazim-husain.netlify.app

- Designed and developed a fully responsive portfolio website with smooth GSAP animations, modern UI/UX design, and mobile-first approach
- Deployed using Vite build optimization and Netlify for continuous deployment, achieving fast load times and SEO optimization

Fury - 2D Platform Game | Unity, C#, Physics, Animation, Game Design

kazkuz.itch.io/fury

- Developed a physics-based 2D platformer featuring single-player and local multiplayer modes with custom mechanics including wall sliding, combat interactions, and accurate collision detection
- Implemented enemy AI behavior and interactive environment elements using Unity's physics engine for realistic movement and responses
- Created comprehensive UI systems including main menu, control screens, and game modes with integrated animations and class structures

NASA Space Apps Hackathon – CO₂ Heatmap | Python, Streamlit, Folium, GPT, Pandas, JavaScript

- Collaborated with a team of four to develop a web app visualizing Seattle's CO₂ emissions using environmental datasets and interactive heatmaps
- Integrated GPT-powered chatbot for contextual climate data insights, improving user engagement and data accessibility

Heartbeat Sensor | ESP32, Arduino, React, Tailwind, Node.js, Express, REST APIs

- Built a real-time BPM monitoring system with ESP32 and IR sensors, streaming data to a React web application
- Integrated Google Gemini API to analyze heart rate patterns and provide insights through an interactive chat interface

TECHNICAL SKILLS AND COURSEWORK

Languages: Python, Java, C++, JavaScript, C#, SQL, R

Frameworks & Libraries: React.js, Flask, Tailwind CSS, Pandas, Scikit-learn, Spark, Unity

Tools & Platforms: Git, Docker, AWS (S3, EC2), MongoDB, Azure DevOps, Android Studio

Relevant Coursework: Machine Learning, Mobile Development, Object-Oriented Development, Computer Systems, Computer Organization, Databases, Data Structures, Algorithms
